■ The Backstory

Our client was representing the plaintiffs in a medical malpractice case against a multinational medical devices manufacturing company who was notorious for over producing documents. Our client was looking for a fast and economical way to review 317,353 documents by weeding out the “junk” as thoroughly as possible without relying solely on search terms.

■ The Performance

Our client used SENTIO to categorize and only needed to tag 1,305 documents, across 10 categories. From looking at just 0.5% of the data, SENTIO identified the 28,561 most relevant documents for their matter.

■ The Highlight

SENTIO predicted that up to 91% of the data was Not Responsive which saved them roughly 5,100 to 6,200 hours of review - which equates to more than \$1 million in cost savings to their corporate client.
